

Who's been **WOW!**ed by the new Midwest® Stylus™ ATC handpiece?

"I no longer have to switch back and forth from electric to air. This technology gives me one handpiece for everything...When using the Midwest Stylus ATC, the automated torque control feature eliminates the need for excess pressure during tooth reduction."

– Dr. David A. Little

"The ATC has been a joy to use. Its ergonomics and light weight are great features, but the fact that it has continuous torque validates why I bought it. It's my only choice for restorative and crown & bridge."

– Dr. Stefano D. Pierdomenico

"**WOW!** would be an understatement. The Midwest® Stylus™ ATC cuts like a hot knife through butter. It gives me great control and awesome power to get the job done."

– Dr. Robert Lowe

"I can work faster and with more comfort for both my patient and myself, as there is much less vibration and hence a smoother cut for my work."

– Dr. Lucia Pentzke

"The ATC is one of the best equipment purchases I've made in the last twenty years. I didn't have to make a lot of changes to my delivery system, the handpiece size didn't differ from what I have been used to, and it supplied me with all the torque I needed for my restorative needs."

– Dr. Greg Chang

"Its efficient, clean and fast cutting technology is something that blew me away. Cutting a bridge or crown was just a breeze and I save so much chair time. The power is unbelievable!!! It's very easy to maintain and I absolutely love my ATC handpiece and so do our patients."

– Dr. Andrew Liu

"Dentsply's development of the ATC provides the best of both worlds - the form factor of a conventional handpiece with the ability to provide increased torque of an electric handpiece. My ATC gets cleaned, lubricated and sterilized just like my old high speed did. I like the fact that the ATC runs in high-torque, "turbo mode", only when I need it, extending the life of my turbines. And the best part is - the ATC is roughly half the cost of putting an electric handpiece into an operator. Switching to the ATC was a *no-brainer*."

– Dr. Bob Coles
